

ABSTRACT

5 A baked snack having a hollow stick shape obtained  
by baking a dough including an non-gelatinized flour and  
a gelatinized flour, wherein the dough does not substantially  
include active gluten. . According to the present invention,  
a baked snack having a hollow stick shape that can be reliably  
shaped, easily melts in the mouth and is well-moistened with  
no powdery and dry texture is provided. In the baked snack  
10 of the present invention, a large amount of taste providing  
material can be blended in order to improve the taste thereof.  
The novel baked snack having the hollow stick shape suitable  
for the mass production and processing and having an even  
shape with reduced blistering can be provided without  
15 demanding any special device and complicated process.
